
STATEMENT OF WORK (SOW)

AppZen BTP Platform — SAP ECC

1. Project Overview

This Statement of Work documents the complete scope of development, backend logic implementation, and ECC OData service migration work delivered for the AppZen BTP Platform.

The AppZen Cockpit provides a unified interface for extracting master and transactional data from SAP, processing inbound invoices, monitoring RTO transactions, and managing configuration. All ECC OData services have been replicated to custom APPZEN-prefixed variants as part of the ECC feasibility programme.

Applications in scope:

- Config Hub — 5 backend configuration screens
- AppZen Cockpit — 5 categories, 20 extractor/processing screens
- Invoice Processor — Inbound PO / Non-PO posting
- RTO Monitor — Logging & tracking module
- Dynamic Mapping – For Supplier and Purchase Order

2. Config Hub — Screen & Backend (From BTP UI5 Side)

Config Hub provides all backend configuration screens consumed by the AppZen Cockpit and Invoice Processor. All screens run against ECC custom APPZEN OData services.

#	Screen	OData Service	Entity Sets	Logic	Status
1	Outbound Invoices Config	sb_rtoo04	RTOO04, AZ_INV_TYPE, AZ_INV_TYP_SH, RTOO04_SH	POST OData + Search Help GET; Config Hub screen binding; invoice type dropdown from AZ_INV_TYP_SH	✓ Done
2	Inbound Invoices Config	sb_rtio_pos	RTIO_POS, RTIOPOS_SH, CompCode_SH, DocType_SH	POST OData + Search Help GET; company code & doc type search help binding; RTIO_POS CRUD operations	✓ Done
3	Constant Values	SB_AZ_CONST_SRV	APPZEN_CONSTANT, APPZEN_CONNAMES	GET constant name list from APPZEN_CONNAMES; POST/PUT to APPZEN_CONSTANT; aligned with V2 path SB_AZ_CONST_V2	✓ Done
4	Entity Segment	SB_ENT_SEGM_SRV	ENT_SEGM	CRUD operations on ENT_SEGM; segment name validation; used by Cockpit EntityValidationService as source	✓ Done
5	Maintain Std Parameters	SB_MAINT_STD_PRM	Constant_Name, RTO_Type, AZ_Segment_Names, AZ_API_Segment_Names	POST OData; CPIService.js reads CPI credentials from this screen's std_parm entries dynamically	✓ Done

3. AppZen Cockpit — Module & Screen Matrix

The following table covers every screen visible in the AppZen Cockpit application, mapped to its ECC OData service, entity set, and current delivery status.

Category	Screen / Module	OData Service (ECC Custom)	Entity Set	Status
 CONFIGURATION DATA — System & Business Configuration				
Configuration Data	Entity Management	CDS_ENTITY_CDS	xAPPZENxCDS_ENTITY	✓ Done
	Company Codes	API_COMPANYCODE_SRV	A_CompanyCode	✓ Done
	Payment Terms	ZPAYMENTTERMS_CDS	xAPPZENxZPaymentTerms	✓ Done
	WHT Tax API Integration	CDS_WHT_MASTER_CDS	xAPPZENxCDS_WHT_MASTER	✓ Done
	VAT Tax API Integration	CDS_WHT_MASTER_CDS (VAT)	xAPPZENxCDS_WHT_MASTER	✓ Done
 MASTER DATA — Data Foundation & Records				
Master Data	G/L Accounts	FAC_MANAGE_GLACCOUNT_SRV;v=2	xAPPZENxI_GLAccount	✓ Done

Category	Screen / Module	OData Service (ECC Custom)	Entity Set	Status
	Cost Centers	API_COSTCENTER_SRV	xAPPZENxA_CostCenter	✓ Done
	Internal Orders	API_INTERNALORDER_SRV	xAPPZENxA_InternalOrder	✓ Done
	Supplier	API_BUSINESS_PARTNER	xAPPZENxA_BusinessPartner	✓ Done
	WBS Element	API_PROJECT_V2	xAPPZENxWBSElement	✓ Done
	Profit Center	API_PROFITCENTER_SRV	xAPPZENxA_ProfitCenter	✓ Done
	Plant	API_PLANT_SRV	xAPPZENxA_PLANT	✓ Done
	Network Activity	API_PROJECTNETWORK_SRV	xAPPZENxProjectNetwork	✓ Done
 TRANSACTIONAL DATA — Document Processing				
Transactional Data	Purchase Orders	API_PURCHASEORDER_PRCS	xAPPZENxA_PurchaseOrder	✓ Done
	Outbound Invoice Processor (PO)	API_SUPPLINV_PROCESS_SRV	xAPPZENxA_SupplierInvoice	✓ Done
	Outbound Invoice Processor (Non-PO)	SBNPOINVEXT	xAPPZENxInvoiceHeader / Item	✓ Done
 INBOUND PROCESSING — Automation & Intelligence				
Inbound Processing	Invoice Processor (PO)	NA	Appzen GET Call, Invoice_Post to SAP	✓ Done
	Invoice Processor (Non-PO)	NA	Appzen GET Call, Invoice_Post to SAP	✓ Done
 LOGGING DETAILS — Monitoring & Tracking				
Logging Details	RTO Monitor	sb_rto_mon	RTO_MON	✓ Done

4. Backend Logic Implementation — Per Screen Detail

This section details the specific backend logic implemented for each screen including OData service configuration, entity binding, service layer changes, and infrastructure file updates.

#	Screen / Module	Backend Logic Implemented	Files Changed	Status
1	Entity Management	EntityConfig.js — entity set binding to xAPPZENx_CDS_ENTITY via CDS_ENTITY_CDS; EntityValidationService filter to Config Hub entity list; ValueHelpService multi-field dialog; i18n appzen_ prefix.	EntityConfig.js, EntityValidationService.js, ValueHelpService.js	Done
2	Company Codes	OData V2 model init via API_COMPANYCODE_SRV; entity set A_CompanyCode; xs-app.json destination route /sap/opu/odata/sap/API_COMPANYCODE_SRV; search help GET with \$filter.	EntityConfig.js, xs-app.json	Done
3	Payment Terms	Custom CDS service ZPAYMENTTERMS_CDS; entity set xAPPZENxZPaymentTerms; ValueHelpService with PaymentTerms_SH; pagination + search implemented in BaseController.	EntityConfig.js, ValueHelpService.js	Done
4	WHT / VAT Tax	CDS_WHT_MASTER_CDS service; entity xAPPZENx_CDS_WHT_MASTER; Tax code search help, rate derivation logic; CPIService payload builder maps TaxCode → AppZen API field; VAT variant handled as separate EntityConfig entry.	EntityConfig.js, CPIService.js, ValueHelpService.js, Appzen_TAXAPIVAT.js, Appzen_TAXAPIWHT.js,	Done
5	G/L Accounts	FAC_MANAGE_GLACCOUNT_SRV;v=2; entity xAPPZENxI_GLAccount; ;v=2	EntityConfig.js,	Done
6	Cost Centers	API_COSTCENTER_SRV; entity xAPPZENxA_CostCenter; fallback to I_CostCenter noted; ValueHelpService dependent filter on CompanyCode; BaseController pagination with \$skip/\$top.	EntityConfig.js, ValueHelpService.js	Done
7	Internal Orders	API_INTERNALORDER_SRV; entity xAPPZENxA_InternalOrder; ValueHelp with order category filter; OData V2 \$filter multi-operator logic (EQ, CONTAINS) in ValueHelpService.	EntityConfig.js, ValueHelpService.js	Done
8	Supplier	API_BUSINESS_PARTNER; entity xAPPZENxA_BusinessPartner; ValueHelpService supplier name + ID dual search; duplicate prevention logic in ValueHelpService; EntityValidationService filters to entity-config maintained suppliers.	EntityConfig.js, ValueHelpService.js, EntityValidationService.js	Done
9	WBS Element	API_PROJECT_V2; entity xAPPZENxWBSElement; project-level filter; ValueHelp with WBSElement description;	EntityConfig.js,	Done
10	Profit Center	API_PROFITCENTER_SRV; entity xAPPZENxA_ProfitCenter; period filter optional; ValueHelpService search dialog; OData V2 GET with \$select for performance.	EntityConfig.js,	Done
11	Plant	API_PLANT_SRV; entity xAPPZENxA_PLANT; search help GET with plant description; ValueHelpService standard binding.	EntityConfig.js,	Done

#	Screen / Module	Backend Logic Implemented	Files Changed	Status
12	Network Activity	V4 OData service API_PROJECTNETWORK_SRV in S/4HANA; entity xAPPZENxProjectNetwork; Component.js dual model init (V2 default + V4 for network); manifest.json odataVersion: '4.0'; BaseController V4 ODataListBinding.	EntityConfig.js, Component.js, manifest.json, BaseController.js	Done
13	Purchase Orders	API_PURCHASEORDER_PRCS; entity xAPPZENxA_PurchaseOrder; BaseMappingController dynamic field mapping; OData V2 navigation to PO Items (/A_PurchaseOrderItem).	EntityConfig.js, MappingConfig.js, BaseMappingController.js	Done
14	Outbound Invoice (PO)	API_SUPPLINV_PROCESS_SRV; entity xAPPZENxA_SupplierInvoice; GET with \$expand for line items;	EntityConfig.js, OutboundController.js	Done
15	Outbound Invoice (Non-PO)	SBNPOINTEXT; dual entity: xAPPZENxInvoiceHeader (header) + xAPPZENxInvoiceItem (items); OData V2 header-item navigation; NonPO flag in EntityConfig; separate GET for items via \$filter on InvoiceNo.	EntityConfig.js, OutboundController.js	Done
16	Inbound Invoice Post (PO)	GET Call to Appzen Invoices Service ,and POST Invoices to SAP and also Logging to RTO Monitor.	Appzen_InboundProcessor.controller.js, (Separate Invoice Processor Application integrated with Appzen Cockpit)	Done
17	Inbound Invoice (Non-PO)	GET Call to Appzen Invoices Service ,and POST Invoices to SAP and also Logging to RTO Monitor.	Appzen_InboundProcessor.controller.js, (Separate Invoice Processor Application integrated with Appzen Cockpit)	Done
18	RTO Monitor	sb_rto_mon OData service; entity RTO_MON; RAP backend table /appzen/rto_mon; batch consolidation logic — one RTO entry per batch not per invoice; CPIService.js writes batch_id, status, timestamp, entity_type; TypeError fix applied; OData payload field alignment.	Appzen_RTOMonitor.controller.js, CPIService.js	Done

5. SOW Delivery Summary

Module / Area	Total Screens	Completed	Key Deliverables
Config Hub	5	5	5 config screens — OData binding + CRUD logic
AppZen Cockpit — Configuration Data	5	5	Entity, Company Code, Payment Terms, WHT Tax Screen, VAT Tax Screen
AppZen Cockpit — Master Data	8	8	GL Account , Cost Center, Supplier , WBS, Profit Center, Plant, Network (V4), Internal Orders
AppZen Cockpit — Transactional Data	2	2	Purchase Orders, Outbound Invoice (PO + Non-PO)
Invoice Processor	1	1	Inbound PO (Completed), Non-PO(Completed)
RTO Monitor	1	1	RTO Monitor batch-level logging, CPIService integration
Infrastructure / Cross-Cutting	—	—	xs-app.json routes, manifest.json, ui5.yaml, EntityValidationService, CPIService, i18n
TOTAL	22	22	ECC OData migration complete across all live modules
